

Oil & Fuel Spill Kits

100% Organic Range

The absorbent components of these Global Spill Kits are manufactured from natural materials, allowing the used absorbents (if permitted) to be land-farmed. Being organic, the used absorbents can be biodegraded at a suitable and approved land farm facility to minimize disposal costs.

Kits include a variety of Hisorb™ organic cotton absorbents that are able to absorb up to 25 times their own weight in oil. Hisorb™ has a fast wicking action to rapidly soak up only oil, fuel, diesel, petrol, solvents and other hydrocarbons, whilst repelling water (hydrophobic). They are lightweight, easy to use, clean, non allergenic and dust free, making them perfect for use in today's modern workplace.
