

Combination Pollution Control Stations

When different types of liquids are stored, handled or spilt, it is necessary to cater for a range of potential spills. The Global Combination Pollution Control Stations provide the ammunition to do just that.

These multi bin Stations are colour coded, labelled and can be conveniently positioned at either a central location or spill hot spot. The bins sit in a protective steel framework with distinctive signage for easy identification. Select the standard combination of Oil & Fuel bin + Hazchem bin + Waste bin or customise with any combination of Global Wheelie Bin Spill Kits including a contaminated waste bin for used absorbents.

PCS240D-PCW – Combination Pollution Control Station 455 litre absorbent capacity

- Oil & Fuel Spill Kit PLUS Hazchem Spill Kit PLUS Contaminated Waste Bin.
- Keep all your spill response equipment in one central location – indoors or outdoors.

1	Oil & Fuel Outdoor Spill Kit	SKH240-P
